ISBN-13: 978-1536941395

Retail price: \$10

Page count: 207 pages

Genre: Science Fiction/Experimental

Promotional Information

3.1 Snappy Synopsis

Black Gardens is a novella about Mennonite asteroid miners, set off to isolate themselves from Earth. All is not as it seems, and worlds scrape by each other with the friction of cognitive dissonance.

This collection also includes earlier short stories. Tales of strange apocalypses and psychological adventures, about what it means to be human and the many ways we go wrong.

3.2 Longer Synopsis

Black Gardens weaves our world together with a seeming future, exploring the seams between our reality and others. Mennonite space miners exchange asteroid materials for supplies, in exchange for being able to stay far away from the corruption back on Earth. DARPA has created a technological oracle to answer top-secret questions, trying to keep it under control, but not realizing how dangerous their captive may be. And a hapless university lab worker sits in the crossfire between it all, struggling to come to grips with what is really happening when he strikes up a conversation with one of the young asteroid miners, whose discoveries bring our world to the brink of apocalyptic change.

About the Author

Daniel G. Fitch is an apolitical programmer by day and a polite punk by night. He is obsessed with the boundaries between science and fiction; human and other; us versus them. He can be found walking around Madison, Wisconsin, where he is often spotted jotting strange ideas down. He very rarely writes in the third person, except when self-publishing books. *Black Gardens* is his first finished novella, released here with other collected short stories.
